INTRODUCTION

ABOUT US

Techno Metal Post (TMP) was founded in Canada in 1993. Through the founders vision, dedication, and hard work, TMP has grown from a local family business to a worldwide network of more than 180 professionally trained and certified dealers. Along with this network expansion and progress, TMP has remained at the forefront of cutting-edge technology in the design and manufacturing of helical piles and installation equipment over 30 years. TMP helical piles are engineered and tested to the highest quality standards; guaranteed and proven to be durable even in the most challenging soil conditions. TMP designs and builds some of the most versatile, state-of-the-art proprietary installation equipment in the world. As a result of our innovative technology and our far-reaching network of dealers, TMP has quickly become the world leader in helical piles.

QUALITY MANUFACTURING PILES

Our TMP team is committed to purchasing North American steel for helical pile manufacturing. TMP helical piles are manufactured using structural steel according to ASTM A500 grade C, CSA G40.21-44W. They are also welded according to CSA W47.1 standard. They can be hot-dipped galvanized according to ASTM A123. The piles have been load tested according to ASTM standards in a variety of soil types around the world. Our piles are designed to resist axial, lateral, and bending moment loads. The use of the helix maximizes the load bearing capacity of soil.

CONNECTION SYSTEM

Different types of structures require different pile caps and brackets. For post structures like decks, we offer a variety of pile caps for standard dimensional lumber sizes. TMP has also developed new construction pile caps. We also offer a line of foundation repair brackets. TMP can also make custom brackets upon request, for special types of connections.

INSTALLATION EQUIPMENT

TMP recognizes that its investment in the production of its own line of equipment, for the sole purpose of installing helical piles, is one of many advantages over other companies. Because every helical pile project is different, TMP produces three machines varying in size, power, and capabilities; each of which is specially made for helical pile installations. Every machine is designed to deliver an accurate and reliable job and built to precisely measure the torque produced during the installation process. From this information, our certified installers know the allowable load capacities of each helical pile after its installation. TMP has developed machines of different sizes, performance levels, and capacities. Regardless of the machine used, they are all designed to perform rigorous and reliable work. Each model is equipped with a torque measurement system. Thanks to this information, our certified installers know the precise load-bearing capacity of each pile installed.

QUALITY MANUFACTURING BACKED BY INSTALLATION EXPERIENCE

Behind TMP's product quality, there is a quality control for the installation of the product as well. Professionally trained certified installers and highly specialized and skilled engineers ensure the proper installation of TMP's helical pile foundation system.

DEALER-INSTALLERS

New dealers and installers undergo and thorough and substantial hands-on training, equipping them with the skills and knowledge to succeed in their projects. Over the past 30 years, our dealers and installers have completed over 3 million pile installations for projects throughout the world. They have installed helical piles in almost every soil type that exists throughout Canada, the United States, Europe, the Caribbean, French Polynesia and New Zealand.

ENGINEERING TEAMS

TMP's engineers are specialized in geotechnical and structural engineering and are here to assist and offer you personalized service – from small residential projects to large-scale industrial installations. Whenever you specify a helical pile foundation project, our engineers are available to assist in determining the proper helical piles to use for each of your projects and will issue a certificate and guarantee the work according to standards.

DISCLAIMER LIMITATION OF LIABILITY

GENERAL LIMITATIONS

The allowable capacities of TMP manufactured products shown in this Spec Book are only indicative and provide a general guidance to the reader in order to help specify the appropriate product for their project and it is recommended to consult with a engineer. Site specific conditions and engineering may reduce the allowable capacities of the helical piles shown in this Spec Book.

The allowable capacities of helical piles are subject to a strict compliance with the installation procedure. Namely, the helical piles shall be installed to appropriate depth and soil bearing stratum. A minimum safety factor of 2.0 is required for determining allowable capacity from correlations with final installation torque. A higher safety factor may apply for some applications.

UNITED STATES CERTIFICATIONS

TECHNICAL CERTIFICATIONS - AN ASSURANCE OF QUALITY AND RELIABILITY

TMP has worked tirelessly to obtain the required accreditation and acceptance of its products throughout the world. Our engineers have spent countless hours ensuring that our products meet the strictest standards. TMP is the first helical pile company in the world to be recognized and to receive certifications from multiple countries.

INTERNATIONAL CODE COUNCIL EVALUATION SERVICE (ICC-ES)

EVALUATION SERVICE REPORT #3418

ICC-ES is the International Code Council Evaluation Service. This organization is widely accepted and trusted to evaluate products and confirm the compliance with building codes. In November 2013, TMP received an Evaluation Report (ESR-3418), which covers the P3 and P3HD shaft (3.5" O.D.). The report confirms the compliance with the International Building Code (IBC). In addition acceptance for seismic zones DEF was obtained in 2022. The most current version of this report can be found on our corporate website under professional then certifications.

INTERNATIONAL ASSOCIATION OF PLUMBING AND MECHANICAL OFFICERS (IAPMO)

EVALUATION REPORT #481

In 2018, TMP was the first helical pile manufacturer to receive International Residential Code (IRC Code) approval with the publishing of IAPMO ER 481. ER 481 approval includes pile models P1, P2, and P3 shafts and selected underpinning brackets. In 2022, this approval was updated to include seismic zones DEF and to provide a prescriptive helical pile foundation option to replace concrete deck piers. The most current version of this report can be found on our corporate website under professional then certifications.

CERTIFICATIONS & EVALUATIONS

International : TMP has been evaluated and approved by the National Quality Assurance as complying with the ISO 9001. Certificate #17081 requirements.

Canada: Since 2002, renewed in 2018, Techno Pieux Inc. has been evaluated by the CCMC (Canadian Construction Materials Centre) under number 13059-R, which confirms that its technology complies with the National Building Code of Canada.

CWB: TMP is also certified by the **Canadian Welding Bureau (CWB) CSA W47.1.**

France: Since 2006, TMP has been the first helical pile company to benefit from a technical assessment issued by the Commission Chargée de Formuler des Avis Techniques (CCFAT) N°3/16-873.

Europe: TMP was the first helical pile company to be certified as meeting the requirements of European standard EN 1090-1:2009 + A1:2011 / Execution of steel structures class 2, EN 1090-2.

United Kingdom: TMP is the first to receive the BBA Approval Certificate (Certificate 18/5477), which is recognized by building authorities, government departments, architects, designers and industry insurers.

SELECTION TABLE

Model (Outside Diameter)	Project Type	Maximum Allowable Bearing Capacity ^{1 2 3 4}		Allowable Lateral Capacity ⁵	Maximum Installation Torque	Allowable Bending Resistance ⁷
		Compression (lb)	Tension (lb)	lb	ft-lb	ft-lb
P1 (1.9")	Light Residential (deck without roof, stairs, etc.)	6,700	4,450	250	1,336 ⁸	785
P2 (2.375")	Medium Residential and Light Commercial (deck, carport, sunroom, single story residential addition, etc.)	11,200	7,450	550	2,242 ⁸	1,360
P2HD (2.375")	Medium Residential and Light Commercial (deck, carport, sunroom, single storey residential addition, concrete slab, etc.)	20,000	13,300	550	4,000	2,300
P2.5 (2.875")	Medium Residential and Light Commercial (deck, carport, sunroom, single storey residential addition, new construction, concrete slab etc.)	20,000	13,300	650	4,444	2,809
P3 (3.5")	Heavy Residential, Light to Medium Commercial and Industrial (two-story residential addition, cottage, sign, carport, solar panel, new construction, underpinning, boardwalk, tie-back, etc.)	29,800 to 33,000 ¹⁰	19,850	1,200	8,509 ⁸	4,571
P4⁶ (4")	Heavy Residential, Light to Medium Commercial and Industrial (cottage, sign, light post, solar panel, new construction, boardwalk, tie-back, bollard, etc.)	35,000 to 45,000 ¹⁰	23,100	1,500	11,000	6,371
P3HD⁶ (3.5")	Heavy Residential, Light to Heavy Commercial and Industrial (new construction, underpinning, tie-back, etc.)	38,500 to 45,000 ¹⁰	25,700	1,400	11,000	6,428
P4HD⁶ (4")	Heavy Residential, Light to Heavy Commercial and Industrial (new construction, retaining wall, tie-back, etc.)	45,600 to 50,000 ¹⁰	30,400	1,500	14,500	8,944
P5⁶ (5.563")	Heavy Residential, Light to Heavy Commercial and Industrial (cottage, sign, light post, new construction, boardwalk, solar panel, bollard, retaining wall, etc.)	32,600 to 50,000 ¹⁰	21,700	2,750	14,500 ⁹	14,713
P6⁶ (6.625")	Heavy Residential, Light to Heavy Commercial and Industrial (sign, light post, new construction, solar panel, bollard, retaining wall, etc.)	31,200 to 50,000 ¹⁰	20,900	3,700	14,500 ⁹	23,142

1. The maximum compressive bearing capacity (allowable load) includes a safety factor of 2.

2. The maximum bearing capacity (allowable load) is determined by the maximum torque applied by the installation equipment.

3. When the helical foundation is laterally unsupported (soil very loose / soft, liquefiable soils, water and air), the structural strength of the helical foundation must be approved by TMP Engineering department.

4. For tension applications, the helical foundation must be installed such that the minimum depth from the ground surface to the helix is 12D, where D is the diameter of the helix. Contact TMP Engineering department for tension applications when 12D cannot be maintained.

5. Lateral capacity is based on medium dense soils with free head condition with a maximum distance in air or fluid soils of 6" and embedment of 7 feet. Contact TMP Engineering department for other conditions or questions.

6. TMP Model P4, P3HD, P4HD, P5 and P6 are subject to site specific engineering. TMP Engineering department approval is required to use the upper capacity values shown in table.

7. Allowable bending resistance are based on calculations assuming bare steel, 50 year corrosion per AC358 and 1.67 safety factor.

8. Maximum installation torque for P1, P2 and P3 are based on IAPMO-UES Evaluation report no. 481

9. Maximum installation torque for P5 and P6 are limited to the maximum torque of the ET-1 installation equipment

10. Maximum allowable capacities shown in table may be obtained with site specific analysis and/or load testing.

COMMENTS

- For any technical questions, please contact the TMP Engineering department.
- Larger TMP can be used for applications requiring a lateral or bending resistance higher than shown in the selection table.

LIFESPAN EXPECTANCY

INTRODUCTION

TMP helical pile foundation capacities shown in this catalog include consideration for corrosion loss over the life of a typical structure. A typical structure's lifespan is assumed to be 50-75 years and soil corrosivity is assumed to be non-severe up to corrosive soil. Severely corrosive soil sites usually have one or more of the following conditions and require site-specific attention and design: soil resistivity < 1000 ohm-cm, soil PH < 5.5, high organic content soil, mine or landfill waste, soil sulfate concentrations > 1000 ppm, or helical pile foundations located in splash zones of water, especially saltwater. Corrosion loss is commonly accounted for by increased wall thickness, hot-dip galvanization, or a combination of these two techniques. Other corrosion protection systems that are available include sacrificial zinc or magnesium anodes electrically attached to the shafts and impressed current systems. Impressed current systems apply a dc voltage to the system of piles in-order-to interrupt the galvanic reaction and protect all the piles below grade.

CODE REQUIREMENTS

Building code requirements for required corrosion loss of steel piles varies. The United States model code (IBC 2021) is silent on corrosion loss for piles, the National Building Code of Canada (NBC 2015) states that corrosion protection must be provided when soil conditions are corrosive to steel but is silent on corrosion loss for piles. The Canadian Foundation Engineering Manual (CFEM 2006) refers to National Bureau of Standards Monograph 127 (1972) and Bjerrum (1967) in regard of detailed information on corrosion of steel piles. Transport Quebec (CCDG 2020) recommends 1.5 mm total loss, and the European Code (EN 1993-5:2007) recommends various corrosion rates depending on soil type. Other corrosion loss references include Helical Piles, A Practical Guide to Design and Installation, Howard A. Perko, PhD PE and the International Code Council – Evaluation Service, Acceptance Criteria for Helical Foundations ICC-ES AC358.

In the United States, it is common to design to ICC-ES AC358, which recommends a reduced design wall thickness (T_d) to account for corrosion loss. The loss of side wall thickness due to corrosion (T_s) is subtracted from the design wall thickness (T_n). T_s is obtained from the following equations where t equals the design life in years:

Zinc-coated steel: $T_s = 25 t 0.65$, (318 μ m or 0.013" at 50 years)

Bare Steel: $T_s = 40 t 0.80$, (914 μ m or 0.036" at 50 years)

In Canada, the recommended calculation method relating to the loss of thickness by corrosion is similar to that recommended by ICC-ES AC358. The calculation method uses a thickness T_s (thickness of sacrificial steel) based on a minimum service life of 50 years, i.e.:

Black steel (no protection): $T_s = 1.5\text{mm}$

Galvanized steel (per CSA G164): $T_s = 0.32\text{mm}$

Galvanized steel (per ASTM A123): $T_s = 0.36\text{mm}$

In Europe, EN 1993-5:2007 recommends atmospheric corrosion may be taken as 0.01 mm per year in normal conditions or 0.02 mm per year where marine conditions are applicable. Corrosion loss in soils, EN 1993-5:2007 presents the following Table 4-1 in soil and Table 4-2 in water

Recommended value of thickness loss (mm) due to corrosion for piles and sheet piles in soils, with or without groundwater

Required design working life	5 years	25 years	50 years	75 years	100 years
Undisturbed natural soils (sand, silt, clay, schist,...)	0.00	0.30	0.60	0.90	1.20
Polluted natural soils and industrial sites	0.15	0.75	1.50	2.25	3.00
Aggressive natural soils (swamp, marsh, peat,...)	0.20	1.00	1.75	2.50	3.25
Non-compacted and non-aggressive fills (clay, schist, sand, silt,...)	0.18	0.70	1.20	1.70	2.20
Non-compacted and aggressive fills (ashes, slag,...)	0.50	2.00	3.25	4.50	5.75

Notes

- Corrosion rates compacted fills are lower than those in non-compacted ones. In compacted fills the figures in the table should be divided by two.
- The values given for 5 to 25 years are based on measurements, whereas the other values are extrapolated.

Recommended value for the loss of thickness (mm) due to corrosion for piles and sheet piles in fresh water or in sea water

Required design working life	5 years	25 years	50 years	75 years	100 years
Common fresh water (river, ship, canal,...) in the zone of high attack (water line)	0.15	0.55	0.90	1.15	1.40
Very polluted fresh water (sewage, industrial effluent,...) in the zone of high attack (water line)	0.30	1.30	2.30	3.30	4.30
Sea water in temperate climate in the zone of high attack (low water and splash zones)	0.55	1.90	3.75	5.60	7.50
Sea water in temperate climate in the zone of permanent immersion or in the intertidal zone	0.25	0.90	1.75	2.60	3.50

Notes

- The highest corrosion rate is usually found in the splash zone or at the low water level in tidal waters. However, in most cases, the highest bending stresses occur in the permanent immersion zone, see the table above.
- The values given for 5 to 25 years are based on measurements, whereas the other values are extrapolated.

HOT DIP GALVANIZATION

TMP foundations can be hot-dipped galvanized to reduce corrosion loss and increase lifespan. Galvanization is performed per ASTM A123. Minimum galvanization thickness of TMP products is 75 µm or about 3 mils (530 g/m²). This zinc coating sacrifices itself and protects the base metal prolonging service life by about 15 years based on AASHTO and AC-358. Performance of hot-dipped galvanized steel in soil is summarized by Perko 2007.

OTHER GOOD PRACTICE RECOMMENDATIONS

When in doubt of the actual soil conditions on the project site, it is conservative to select hot-dipped galvanized steel products or use a cathodic protection system. Welds at couplings for hot-dipped galvanized steel shafts should have a coat of zinc-rich paint applied prior to advancing the coupling into the ground or be protected by a sacrificial zinc anode.

HELICAL PILES

MODEL P1

Shaft

Wall Thickness	0.145" (3.68 mm)
Round HSS Outside Diameter	1.9" (48.3 mm)
Available Standard Lengths	5'-3" (1.6 m) / 7'-0" (2.1 m) / 10'-6" (3.2 m)

Load Specifications

Max. Installation Torque	1,336 ft-lb (1,810 N-m)
Max. Allowable Capacity*	6.7 kips (29.8 kN)

* Higher load ratings could be considered with site-specific engineering.

Technical Specifications

Commonly Used Structure	Light Residential
Code Evaluation	Listed per IAPMO-UES (ER-481)
Standard Steel	ASTM A500 Grade C Fy=51 ksi min (350 MPa)
Black Steel Design Life	50 years per AC308
Coating	Galvanized or Black Steel
Galvanization Compliance	ASTM A123/A123M
Additional Corrosion Protection	Cathodic Protection System available

Helix

Pitch	3" (76.2 mm)
Thickness	0.375" (9.5 mm)
Standard Steel	CSA G40.21-44W Fy=44 ksi min (300 MPa)
Coating	Galvanized or Black Steel
Multiple Welded Helix	Available
Helix Size*	6" (152 mm) to 12" (305 mm)

* Other sizes available upon request.

HELICAL PILES

MODEL P1

Sleeve (Available)

Function Utility	Protection against soil movements
Wall Thickness	1/16" (1.6 mm)
Outside Diameter	± 2.125" (± 54.2 mm)
Length	± 66" (± 1.67 m)
Weight	± 0.65 lb (± 0.30 kg)
Material	HDPE
Color	Green

Pile Caps

Wood Structure Connectors

Pages 34, 35, 38, 39, 42, 43, 46-49, 52, 53, 56, 57

HELICAL PILES MODEL P2

Shaft

Wall Thickness	0.154" (3.91 mm)
Round HSS Outside Diameter	2.375" (60.3 mm)
Available Standard Lengths	5'-3" (1.6 m) / 7'-0" (2.1 m) / 10'-6" (3.2 m)

Load Specifications

Max. Installation Torque	2,242 ft-lb (3,037 N-m)
Max. Allowable Capacity*	11 kips (49 kN)

* Higher load ratings could be considered with site-specific engineering.

Technical Specifications

Commonly Used Structure	Medium Residential Light Commercial
Code Evaluation	Listed per IAPMO-UES (ER-481)
Standard Steel	ASTM A500 Grade C Fy=51 ksi min (350 MPa)
Black Steel Design Life	50 years per AC308
Coating	Galvanized or Black Steel
Galvanization Compliance	ASTM A123/A123M
Additional Corrosion Protection	Cathodic Protection System available

Helix

Pitch	3" (76.2 mm) / 5" (127 mm)
Thickness	0.375" (9.5 mm)
Standard Steel	CSA G40.21-44W Fy=44 ksi min (300 MPa)
Coating	Galvanized or Black Steel
Multiple Welded Helix	Available

Sleeve (Available)

Function Utility	Protection against soil movements
Wall Thickness	1/16" (1.6 mm)
Outside Diameter	± 3.125" (± 79.4 mm)
Length	± 66" (± 1.67 m)
Weight	± 1.25 lb (± 0.57 kg)
Material	HDPE
Color	Green

Outside Couplings

	Regular
Assembly	Welded
Wall Thickness	0.216" (5.49 mm)
Round HSS Outside Diameter	3.5" (88.9 mm)
Standard Steel	ASTM A500 Grade C Fy=51 ksi min (350 MPa)
Length*	3.5" (88.9 mm)

* Factory welded or welded on site.

Pile Caps

Wood Structure Connectors	Pages 36, 37, 50, 51, 54, 55, 58-61, 63, 64
Steel Structure Connectors	Page 62
Concrete Construction Connectors	Pages 62, 69-71

HELICAL PILES MODEL P3

Shaft

Wall Thickness	0.216" (5.49 mm)
Round HSS Outside Diameter	3.5" (88.9 mm)
Available Standard Lengths	5'-3" (1.6 m) / 7'-0" (2.1 m) / 10'-6" (3.2 m)

Load Specifications

Max. Installation Torque :

with **Regular** and **Expanded** coupling 8,509 ft-lb (11,527 N-m)

with **Reinforced** coupling 11,000 ft-lb (14,902 N-m)

Max. Allowable Capacity* 29.8 kips (132.4 kN) to 33 kips (146.7 kN)

* Higher load ratings could be considered with site-specific engineering.

Technical Specifications

Commonly Used Structure	Heavy Residential
	Light to Medium Commercial
	Industrial
Code Evaluation	Listed per
	ICC-ES (ESR-3418) / IAPMO-UES (ER-481)
Standard Steel	ASTM A500 Grade C
	Fy=51 ksi min (350 MPa)
Black Steel Design Life	50 years per AC308
Coating	Galvanized or Black Steel
Galvanization Compliance	ASTM A123/A123M
Additional Corrosion Protection	Cathodic Protection System available

Helix

Pitch	3" (76.2 mm) / 5" (127 mm)
Thickness	0.5" (12.7 mm)
Standard Steel	CSA G40.21-44W
	Fy=44 ksi min (300 MPa)
Coating	Galvanized or Black Steel
Multiple Welded Helix	Available
Helix Size*	8" (203 mm) to 24" (610 mm)

* Other sizes available upon request.

		2 ply - LVL beam	6,000 lb. (26.7 kN)	7,700 lb (34.3 kN)	1,750 lb (7.8 kN)		
		4 x 4 SPF Post	6,500 lb (28.9 kN)	8,100 lb (36.0 kN)	1,625 lb (7.2 kN)		
	A1/2-ADJ + PUE-5	3 ply 2 x ___ SPF Beam	4,300 lb (19.1 kN)	4,500 lb (20.0 kN)	1,025 lb (4.6 kN)	700 lb (3.1 kN)	Not rated
		3 ply - LVL beam	6,000 lb (26.7 kN)	10,400 lb (46.3 kN)	1,750 lb (7.8 kN)		
		6 x 6 SPF Post	6,500 lb (28.9 kN)	11,000 lb (48.9 kN)	1,625 lb (7.2 kN)		

Installation instructions and special notes

1. Allowable tension and lateral capacity are based on NDS code and load duration Cd=1.6
2. Allowable compression capacity are based on NDS code and internal testing. Cap must directly bear on shaft below.
3. For wet use multiply table values by 0.7
4. Use all specified fasteners (or approved equivalent) lag screws 3/8" Ø x 2" long or wood screws #8 x 2" long
5. Uplift connection from cap to shaft shall be to apply minimum of 15 ft-lb torque of set screws.
6. Capacity above 7,000 lb must be limited to 1/4" misalignment. For capacity below 7,000 lb, pile installation tolerances must be within 1/2" of misalignment and ± 1° of inclination.
7. Structural Designer is responsible for wood design and verifying capacity of connection to wood members
8. Loads shall be reduced where limited by capacity of the wood and/or capacity of the installed pile
9. For any questions regarding uplift, lateral and compression capacities please contact TMP Engineers at eng.usa@technometalpost.com
10. Maximum exposed height of threaded rod shall be 4".

Pile Caps

Installation instructions and special notes

1. Allowable tension and lateral capacity are based on NDS code and load duration Cd=1.6
2. Allowable compression capacity are based on NDS code and internal testing. Cap must directly bear on shaft below.
3. For wet use multiply table values by 0.7
4. Use all specified fasteners (or approved equivalent) lag screws 3/8" Ø x 2" long or wood screws #8 x 2" long
5. Uplift connection from cap to shaft shall be to apply minimum of 15 ft-lb torque of set screws.
6. Capacity above 7,000 lb must be limited to 1/4" misalignment. For capacity below 7,000 lb, pile installation tolerances must be within 1/2" of misalignment and $\pm 1^\circ$ of inclination.
7. Structural Designer is responsible for wood design and verifying capacity of connection to wood members
8. Loads shall be reduced where limited by capacity of the wood and/or capacity of the installed pile
9. For any questions regarding uplift, lateral and compression capacities please contact TMP Engineers at eng.usa@technometalpost.com
10. Maximum exposed height of threaded rod shall be 4".

WOOD STRUCTURE CONNECTORS

U PLATE - ADJUSTABLE (old version)

AS1 OR AS2 + PUE-4 OR PUE-5

Application

Used for connecting wood post and beams.

Mechanical Capacity

Single bearing plate

Ultimate Compression / Tension 18 kips / 4 kips

Allowable Compression / Tension 9 kips / 2 kips

Double bearing plate (PCE-4 + PUE-4 or PUE-5)

Ultimate Compression / Tension 22 kips / 4 kips

Allowable Compression / Tension 11 kips / 2 kips

Technical Specifications

Material (standard) :

Cap CSA G40.21 / 300W

Insert ASTM A500 Grade C

Threaded rod 1" Ø SAE Grade 2

Black Steel Design Life 50 years per AC358

Coating Galvanized

Galvanization compliance ASTM A123

AS1 + PUE-4 Simple

AS2 + PUE-5 Double

Geometry :

Pile Model	Model No.	Dimensions

		6 x 6 SPF Post	15,000 lb (66.7 kN)	1,625 lb (7.2 kN)		

Pile Caps

Installation instructions and special notes

1. Allowable tension and lateral capacity are based on NDS code and load duration Cd=1.6
2. Allowable compression capacity are based on NDS code and internal testing. Cap must directly bear on shaft below.
3. For wet use multiply table values by 0.7
4. Use all specified fasteners (or approved equivalent) lag screws 3/8" Ø x 2" long or wood screws #8 x 2" long
5. Uplift connection from cap to shaft shall be to apply minimum of 15 ft-lb torque of set screws.
6. Capacity above 7,000 lb must be limited to 1/4" misalignment. For capacity below 7,000 lb, pile installation tolerances must be within 1/2" of misalignment and ± 1° of inclination.
7. Structural Designer is responsible for wood design and verifying capacity of connection to wood members
8. Loads shall be reduced where limited by capacity of the wood and/or capacity of the installed pile
9. For any questions regarding uplift, lateral and compression capacities please contact TMP Engineers at eng.usa@technometalpost.com

WOOD STRUCTURE CONNECTORS

FLAT PLATE - FIXED

A1/2-FIX + PCE-4 OR PCE-5

Application

Used for connecting wood post and beams.

Mechanical Capacity

Single bearing plate

Ultimate Compression / Tension 22 kips / 4 kips

Allowable Compression / Tension 11 kips / 2 kips

P4		6" x 6" x 0.5"	40
P5		6" x 6" x 0.5"	40

Installation Instruction

1. Capacity is based upon minimum 12 inches of concrete above cap plate. Cap plate is embedded 4" into concrete, and has minimum 4 inches edge distances.
2. Capacities assume 4 inches edge distance to concrete support surfaces.
3. For use in slabs, or other applications that do not meet minimum concrete cover requirements contact TMP Engineering.

CONCRETE STRUCTURE CONNECTORS

COUPLING WITH VERTICAL REBAR

RC2-2, RC2.5-2, RC2.5-3, RC3-2 OR RC3-3

Application

Used to connect to concrete structures such as concrete grade beams and isolated sono-tube pile caps.

Technical Specifications

Adapter Standard Steel	ASTM A500 GRADE C
Reinforcing Steel	A706 GR60 (CSA G30.18.58W)
Black Steel Design Life	50 years per AC358
Coating	Galvanized per ASTM 123 or Black Steel

Pile Caps

Geometry / Allowable Capacity

Pile Model	Cap Model No.	Quantity of #5 Bars	Adapter	Allowable Capacity (kips)	
				Compression	Tension
P2 or P2HD	RC2-2	2	2.875" (73.0 mm) x 0.203" (5.16 mm)	20.0	17.5
P2.5	RC2.5-2	2	3.5" (88.9mm) x 0.216" (5.49mm)	20.0	17.5
	RC2.5-3	3		20.0	20.0
P3 or P3HD	RC3-2	2	4.000" (101.6 mm) x 0.226" (5.74 mm)	20.0	17.5
	RC3-3	3		30.0	26.0

Installation Instruction

1. Minimum concrete cover is 2 inches (cast against forms) and 3 inches (cast against earth) or as specified by project engineer.
2. Connects to TMP Shaft with 3/16" fillet weld all around perimeter.
3. Welds on galvanized steel shall have coat of Zinc-Rich paint as specified by paint manufacturer.
4. Capacity is based upon $F'_c = 2,500$ psi minimum and $FS = 1.67$.

FOUNDATION REPAIR BRACKETS

GENERAL INFORMATIONS / SM

Technical Specifications

Code Evaluation	Listed per IAPMO ER 481 (SM-1, SM-3, SM-4)

FOUNDATION REPAIR BRACKETS

CONCRETE WALL #1

SM-1

Application

Underpinning bracket used to stabilize or lift concrete foundation walls

Mechanical capacity

Ultimate Compression	60 kips
Allowable compression	30 kips

Technical Specifications

Material specifications are available upon request.

Geometry Wall Bracket (SM-1)

- Primary bolt locations
- Alternate bolt locations

Installation Instructions

1. Locate and clear all utilities.
2. Excavate in a safe manner to base of the footing.
3. Cut and chip footing back to face of wall.
4. Partially install helical pile lead section.
5. Position wall bracket and footing leg.
6. Bolt wall bracket to wall.
7. Continue helical pile installation as required to meet load.
8. Cut off pile to desired height.
9. Preload, lift as needed, and weld off all connections.

FOUNDATION REPAIR BRACKETS

CONCRETE MASONRY UNIT (CMU) WALL #2

SM-2

Application

Underpinning bracket to stabilize or lift masonry and concrete foundations that are supported on concrete spread footings.

Mechanical capacity

Ultimate Compression	38 kips
Allowable compression	19 kips

Technical Specifications

Material specifications are available upon request.

Geometry Wall Bracket (SM-2)

Installation Instructions

1. Locate and clear all utilities.
2. Excavate in a safe manner to base of the footing.
3. Cut and chip footing back to face of wall.
4. Partially install helical pile lead section.
5. Position wall bracket and footing leg.
6. Bolt wall bracket to wall.
7. Continue helical pile installation as required to meet load.
8. Cut off pile to desired height.
9. Preload, lift as needed, and weld off all connections.

FOUNDATION REPAIR BRACKETS

CONCRETE MASONRY UNIT (CMU) WALL #3

SM-3

Application

Underpinning bracket to stabilize or lift masonry and concrete foundations that are supported on concrete spread footings.

Mechanical capacity

Ultimate Compression	34 kips
Allowable compression	17 kips

8. Cut off pile to desired height.
9. Preload, lift as needed, and weld off all connections.

CROSS BRACINGS

2" X 1" HSS TUBING C/W HORIZONTAL TAB

Application

Cross bracing systems are used on free-standing and attached structures supported on minimum P3 shafts. Cross bracing significantly increases the load capacity and stiffness of the pair of helical foundation shafts it connects to. Cross bracing is commonly needed when the helical foundation shafts extend 2 feet or more above grade and when significant lateral loads exist (wind or seismic).

Capacity (per pair of piles)

Ultimate lateral (V_u) : 6 kips (in beam direction)

Allowable lateral (V_a) : 3 kips (in beam direction)

Technical Specifications

Shafts – See shaft Spec Sheets

Tabs – CSA G40.21-44W - $F_y = 44$ ksi min (300 MPa)

HSS bracing – ASTM A500 gr. C - $F_y = 50$ ksi min (345 MPa)

Field Welds – E7018

Geometry - Cross Bracings

Installation instructions and special notes

1. Install your piles until reaching a proper bearing capacity soil	6. Weld the other end of the tabs on the side wall of the pile shaft (see figure above)
2. Cut you piles at the right elevation	7. Apply galvanizing spray paint if required.
3. Measure the distance between piles outside diameter	8. Capacity is based upon full scale load tests in loose/soft soil. Capacity is also based upon shafts extending maximum 3 feet above grade, at least 7 feet below grade, and with 8 foot on-center maximum spacing. Other configurations, including other soil types, may be modeled in LPILE and using fixed head conditions in the direction of the cross bracing. For customized systems that differ from these dimensions, the engineer should check buckling of the HSS cross bracing members.
4. Cut the HSS tubing to the proper length	9. Connection of the cap bracket to the beam may control the lateral capacity (see spec sheets for standard caps)
5. Weld the tabs at each end of the HSS tubing (see figure above)	10. Other configurations (pile type, distance above grade, etc.) should be evaluated by engineer

ROCK ANCHOR SUPPORT

AR1-1 / 2-15M-X-N

Application

Rock Anchor Support (AR1-1/2-X) is used for uncovered one story decks when bedrock is encountered at shallow depth (less than 4 feet). AR1-1/2-X is a quick method to allow the installation of TMP extension when conventional installation of helical pile is not possible due to shallow bedrock. AR1-1/2-X can be used with R1 or R2 TMP extensions.

AR1-1/2-X may be considered for others applications such as covered decks, one story attached addition/sunroom, when approved by the project engineer.

Mechanical Capacity¹⁰

Compression	Ultimate : 22 kips (98 kN)
	Allowable : 6.7 kips (30 kN) for R1 and 11 kips (49 kN) for R2
Uplift*	Ultimate : 7 kips (31 kN)
	Allowable : 3.5 kips (15.5 kN)
Lateral (shear)*	Ultimate : 1 kips (4.5 kN)
	Allowable : 0.5 kips (2.25 kN)

Bending moment (Not Rated)

* Compression, uplift and lateral ratings may be limited by strength of bearing strata and should be confirmed by project engineer, when needed

Technical Specifications

Extensnion – See Extension Spec Sheet

Half-sphere – CSA G40.21-44W - Fy = 44 ksi min (300 MPa)

Field Welds – E7018

Reinforcing dowel - CSA G30.18-58W Fy = 58 ksi min (400 MPa)

Dimensions

A	B	C
125 mm (5")	150 mm (6")	150 mm (6")

ROCK ANCHOR SUPPORT

AR1-1 / 2-15M-X-N

Allowable bearing capacity

	Maximum allowable bearing		Bearing Plate - 6" (150 mm)	
	ksf	kPa	kN	kips
IRC Table R401.4.1				
Cristalline bedrock	12	575	13.3	3.0
Foliated bedrock	4	192	4.4	1.0
NBC Table 9.4.4.1				
Sound rock	10.44	500	11.6	2.6
Clay shale	6.26	300	7.0	1.6

Values presented in the above table are based on building code provisions for presumptive bearing capacities. Higher bearing capacities may be considered with site specific engineering.

Installation instructions and special notes

1. Mark the pile position on bedrock
2. Grind the bedrock to flatten it as needed
3. Drill 3/4" hole (for 5/8" anchor diameter) into bedrock at pile location
4. Use epoxy (follow manufacturer recommendations) and insert steel dowel
5. Weld extension on top of half-sphere with a 1/4" (6 mm) weld
6. Cut the extension at proper height and install cap bracket
7. Install 2" high density insulation around pile shaft extension
8. Back fill the hole with existing ground and/or sand
9. Mechanical capacities of AR1-1/2-X are based on lab testing
10. Allowable bearing capacities based on flat bedrock (± 5 degrees)
11. Complete installation procedure available upon request

ROCK ANCHOR SUPPORT

AR2-1 / 2-RX-X-X-X

Application

Rock Anchor Support (AR2-1/2-X) is used for uncovered one story decks when bedrock is encountered at shallow depth (less than 4 feet). AR2-1/2-X is a quick method to allow the installation of TMP extension when conventional installation of helical pile is not possible due to shallow bedrock. AR2-1/2-X can be used with R1 or R2 TMP extensions. AR2-1/2-X is similar to AR1-1/2-X, but do not require any on-site welding.

AR2-1/2-X may be considered for others applications such as covered decks, one story attached addition/sunroom, when approved by the project engineer.

Mechanical Capacity¹⁰

Compression	Ultimate : 36 kips (160 kN) Allowable : 6.7 kips (30 kN) for R1 extension and 11 kips (49 kN) for R2 extension
Uplift*	Ultimate : 8 kips (36 kN) Allowable : 4 kips (18 kN)
Lateral (shear)*	Ultimate : 2 kips (9 kN) Allowable : 1 kips (4.5 kN)

Bending moment (not rated)

* Compression, uplift and lateral ratings may be limited by strength of bearing strata and should be confirmed by project, engineer, when needed.

INSTALLATION EQUIPMENT

SPECIFICATIONS

Our mechanical engineering team designs and manufactures cutting-edge installation equipment to deliver reliable, efficient on-site installation. Our equipment also provides precision installation to ensure proper load transfer to the pile. In addition, the speed at which we install our equipment means that site delivery is unmatched. Our installation equipment is only available through the TMP network.

EM1

Dimensions : 93" x 48" x 66" (2,362 mm x 1,219 mm x 1,676 mm)

Weight : 4,464 lbs (2,025 kg)

Maximum mast height : 145" (3,683 mm)

Mast rotation : 360°

Minimum clearance required for installation : 8" (203 mm)

Maximum compressive bearing capacity per installed pile : ± 150 kN

Maximum torque : ± 9,000 ft-lb

EM2

Dimensions : 106" x 48" x 68" (2,692 mm x 1,219 mm x 1,727 mm)

Weight : 6,000 lbs (2,722 kg)

Maximum mast height : 147" (3,733 mm)

Mast rotation : 360°

Minimum clearance required for installation : 8" (203 mm)

Maximum compressive bearing capacity per installed pile : ± 150 kN

Maximum torque : ± 9,000 ft-lb

R2D

Dimensions : 98 ½" x 29" x 59" (2,500 mm x 760 mm x 1,500 mm)

Weight : 1 653 lbs (750 kg)

Maximum mast height : 133 ⅞" (3,400 mm)

Mast rotation : ± 60°

Minimum clearance required for installation : 7" (178 mm)

Maximum compressive bearing capacity per installed pile : ± 115 kN

Maximum torque : ± 5,500 ft-lb

ET1

Dimensions : 168" x 68" x 84" (4,267 mm x 1,727 mm x 2,133 mm)

Weight : 8,900 lbs (4,572 kg)

Maximum mast height : 180" (4,572 mm)

Mast rotation : 360°

Minimum clearance required for installation : 9" (229 mm)

Maximum compressive bearing capacity per installed pile : ± 225 kN

Maximum torque : ± 14,500 ft-lb
