

REVOLUTIONIZING THE CONSTRUCTION INDUSTRY

WHAT IS TECHNO METAL POST?

Techno Metal Post simplifies life by providing an alternative foundation solution, that can be installed in most soil conditions. Our product is a helical pile, that is screwed into the ground until it reaches the appropriate load-bearing capacity to support all types of structures. Our piles are installed by our team of certified professionals, using machines specially designed for pile installation. What's more, our unique and exclusive green sleeve slides along the pile in response to ground movements, ensuring its stability during freeze and thaw cycles.

« I've installed the helical piles on many of my shows and I just recently installed them in my own home. Great experience, great team and a great product. »

ADDITIONS

TECHNO METAL POST

THE ADVANTAGES

STRONG, SOLID, AND DURABLE

Building an addition to your home absolutely requires a good foundation and Techno Metal Post's helical piles are the solution! They are installed at the appropriate location to support the required load, regardless of structure size. Our helical piles are assessed and tested according to the highest engineering and quality standards. Therefore, their ability to support heavy loads is guaranteed.

NO EXCAVATION

Installing Techno Metal Post's helical piles requires no excavation or backfilling. The installation is carried out with minimal impact on your property, reducing clean-up and landscaping restoration costs.

IN-HOUSE ENGINEERING SERVICE

After analyzing your project, our engineering department will suggest the most suitable solution for your home addition project. Not to mention, our engineers will ensure the installation of your foundation complies with all municipal/city regulations.
