

REVOLUTIONIZING THE CONSTRUCTION INDUSTRY

WHAT IS TECHNO METAL POST?

Techno Metal Post simplifies life by providing an alternative foundation solution, that can be installed in most soil conditions. Our product is a helical pile, that is screwed into the ground until it reaches the appropriate load-bearing capacity to support all types of structures. Our piles are installed by our team of certified professionals, using machines specially designed for pile installation. What's more, our unique and exclusive green sleeve slides along the pile in response to ground movements, ensuring its stability during freeze and thaw cycles.

« I've installed the helical piles on many of my shows and I just recently installed them in my own home. Great experience, great team and a great product. »

SHEDS / SHELTERS

TECHNO METAL POST
THE ADVANTAGES

STRONG, SOLID, AND DURABLE

No matter the size of your shed, Techno Metal Post's helical piles are a great foundation solution to ensure its stability, regardless of what you store inside. Our exclusive green polyethylene sleeve, that slides over the pile, safeguards it against ground movement caused by freeze and thaw cycles. Therefore, you will no longer have to worry about the level of your floor and door openings throughout the seasons.

NO EXCAVATION

Installing Techno Metal Post's helical piles requires no excavation or backfilling. The installation is carried out with minimal impact on your property, reducing clean-up and landscaping restoration costs.

SIMPLE AND QUICK

Techno Metal Post's helical piles can be installed within just a few hours. Since no excavation and/or concrete is required, you can start building as soon as the helical pile installation is completed.
