TIMBER-FRAME HOUSES & CABINS

TECHNO METAL POST

THE IDEAL FOUNDATION FOR YOUR TIMBER-FRAME HOUSES AND CABINS

When building a house or cabin, there are some options available to you: Having the concrete slab sit directly on helical piles or installing the piles directly under the foundation footing. The latter provides better stability of the home if it sits on low bearing capacity soil, and ensures that the foundation does not crack if the ground shifts.

A helical pile foundation is an excellent way to counteract soil movement and ensure the long-term stability of your home or cabin. Techno Metal Post keeps your projects on dry and stable land.

Sometimes excavation can be limited or nearly impossible, but installing with helical piles can create an above ground crawl space for other projects. Non-polluting, with a minimal carbon footprint, Techno Metal Post is at the forefront of sustainable development.

WHY CHOOSE TECHNO METAL POST ?

**SIMPLE
AND QUICK**

**NO
EXCAVATION**

**LOW
FOOTPRINT**

**ENGINEERING
SERVICE**

**STANDARDS
COMPLIANCE**

**TECHNO METAL POST'S HELICAL PILES
ARE CERTIFIED AND GUARANTEED**
