

TECHNO METAL POST DESIGNS THE FOUNDATIONS OF YOUR PROJECTS

Our dedicated Engineering Department studies your project and proposes the most suitable TMP foundation solution, based on the information provided: plans, load calculations and soil survey. Once your project is launched and in execution phase, we can provide you with the Calculation Note and Conformity Report according to your needs.

FOOTBRIDGES & OVERLOOKS

TECHNO METAL POST

THE IDEAL FOUNDATION
FOR YOUR FOOTBRIDGES & OVERLOOKS

A helical pile foundation has a clear advantage over traditional concrete structures when it comes to boardwalks, footbridges, and overlooks.

Our specialized and compact machinery is unaffected by weather conditions, can access difficult terrains with very little impact on the environment, and causes minimal noise disturbance.

The piles are certified and proven to support heavy loads, even in the most challenging soil conditions, guaranteeing a solid, strong base. The piles can be installed at almost any location, including coastlines and wetlands, and in all seasons, including winter.

Non-polluting, rapid installation, with a minimal carbon footprint, Techno Metal Post's helical piles are also easily dismantlable.

WHY CHOOSE TECHNO METAL POST ?

SIMPLE
AND QUICK

NO
